Q&A

Quality 4.0:

A preventive & future proof
approach on quality management

1.

How will the way that
global operations
being organized, change in
the future, with technology
enablement?

- Organizations are empowering and amplifying their people with data, tools, new systems for better decision making.
 - Remote work, either on an organizational level or with suppliers, can increase up to 25% to 40%

2.

How can we speed the development of new Technologies / Smart Factories, under very delicate financial conditions

- Closely evaluate the situation with your digital partners (design tools, inspection tools or laboratory partners, etc.) and examine how things can be done in a more agile way.
- The use of dashboard and the way things are monitored from afar will be re-imagined.

3.

How practical is this theory,
applicable in continuous
production and specifically
in terms of Quality, for
large-size retailers?

To enable an expandable supply chain
operation, the future cannot be
without collaboration between
brands/retailers and suppliers.

4.

What are the advices for those who are considering the application of smart factories in the near future?

- Evaluate how brands/retailers are proactively connected with suppliers, with digital empowerment.
- Focus on the ability to see things quickly, connectedly and timely.
- Put an emphasis on optimized and transparent information flow.
